

3D MINERALS
Print the Future

Robotic ceramic 3D Printer

Technical datasheet

The robotic ceramic 3D Printer is equipped with 3D Minerals' patented S.D.M. technology. It can print large parts and small production series.

S.D.M. technology (Slurry.Deposition.Modeling)

- "-No print size limit*
- Control of the firmness of the paste and its evolution during time*
- Technical and traditional ceramics*
- Quick and easy preparation of the paste directly in the extruder."*

Technical data :

- Printing size : depending on the robot.
 - Can make complex parts.
- Ideal for automated production of several parts.
 - Can add a rotary table to have 7 axes.
- Control of the S.D.M. extruder with a 3D Minerals software.
